

## **METHOD AND APPARATUS FOR WIRELESS MOBILE SEATING PLATFORM**

### **ABSTRACT OF THE DISCLOSURE**

5           A system (and method) includes a seating platform, at least one sensor for  
detecting a state of the seating platform connected to a first wireless  
communications device, the first wireless communications device for  
conveying information on the state of the seating platform, and a second  
wireless communications device for receiving information from the first  
10       wireless communications device, and a computing system. The second  
wireless communications device is for receiving the information carrying  
signal and is connected to the computing system. The computing system is for  
initiating an action based upon the information.
